

# Your **Trusted** Technology for Identity Management Challenges

# Real-Time Verification Supports Your Unique

## On-Going Security Demands

Today's relentless security challenges and more stringent security mandates, demand a technology platform that can deliver **flexible, practical, and cost-effective solutions.**

**Within This Challenging Security Environment,** personal identity verification, certification tracking, and credential management are critical elements of effective personnel assurance. To trust with assurance, you must know: who an individual is; what he/she is trained to do; and how all active certifications and credentials impact facility access rights.

Real-Time Technology Group (RTTG) delivers trusted solutions for critical identity management and authentication challenges.

RTV3 is the newest generation of our Real-Time Verification technology platform. It flexibly serves the personnel assurance challenges of public agencies and private organizations.

RTV3 also improves risk management and compliance with corporate safety and security requirements.

RTV3 is an interoperable technology platform for the secure collection, processing, and need-to-know data sharing in support of identity, certification, and credential management programs. As the technology that powers personnel assurance programs at many of the highest-value terrorist targets and critical infrastructures throughout the New York Metro area, RTV3 is proven, effective, and efficient.

### RTV3 provides a cost-effective technology platform for:

- Critical Infrastructure and Sensitive Facility Protection
- Corporate Safety and Security Program Compliance
- Certification and Training Record Management

# Personnel Assurance Requirements

## RTV3 Delivers Turnkey, Managed Solutions for Effective Personnel Assurance

REDUCE RISK

### Features

### Benefits

High-security, high-availability managed service hosted in SAS-70 Type II datacenter

- Maintains security and integrity of personal information and privacy rights
- Meets and exceeds data protection requirements
- Assures continuity of service

Online personnel enrollment wizards

- Reduces cost
- Enables easy collection of accurate, comprehensive biographical data and authorization forms

Broad support of biometric acquisition and authentication devices

- Efficient sharing of a variety of biometric data as required for authentication by integrated or independently-managed access control systems

TWIC cardholder authentication

- Eliminates duplication and its cost
- Positively identifies cardholder biometric and credential status

Automated processing and management of professional certifications and training records

- Eliminates duplication of effort and cost
- Assures accuracy of information
- Reduces risk through monitored, audited compliance

Terrorist watch list monitoring

- On-going assurance that all personnel are continually measured against accessible terrorist watch lists

Integrated smartcard production

- Reduces cost and eliminates duplication of effort
- Enables unrestricted authentication of biographic, biometric, certification, employment, and credential data for enhanced access control decision making

Real-time management reports

- Delivers consistent, up-to-date information to authorized users

Mobile verification tools

- Efficient real-time validation of identity, certification, and credential status

## Proven Effective RTV3 Solutions

### For Corporate Safety and Security Program Compliance

#### Compliance Challenge:

*To maintain up-to-date surety, safety, fitness, and technical training certifications, in addition to access control credentials, for compliance with industry's safety and security standards.*

#### RTV3Pro Solution:

RTV3Pro sets a new standard for meeting escalating demands on the corporate sector to comply with industry and government security requirements. As a turnkey managed service, RTV3Pro enables individual organizations to easily administer the private collection, automated processing, and selective validation of personal information, certifications, and credentials that demonstrate compliance with varied security requirements.

A unique architecture enables RTV3Pro to be used in conjunction with other RTV3 programs as an interoperable platform or as a stand-alone managed service. The result, RTV3Pro enables you to develop and administer identity, certification tracking, or credential management programs tailored to your unique human resource needs.

## RTV3 Supports Varied Levels of Assurance

### LOW

Printed ID Cards (Flash and Pass)

### MEDIUM

Real-Time Credential Validation

### HIGH

Real-Time Biometric Authentication

*\* Select any combination or create your own assurance standard for each unique secured area.*

## For Critical Infrastructure and Sensitive Facility Protection

#### Security Challenge:

*To easily and cost-effectively assure personal identity verification of independent, transient, contracted personnel.*

#### RTV3 Solution:

Secure Worker Access Consortium (SWAC) is a unique regional personnel assurance program. RTV3 sustains the SWAC program with a technology platform that securely and privately assures the identity of contractors seeking access to our nation's highest-value terrorist targets. RTV3 enables SWAC to:

- Collect members' biographic information and authorization forms
- Facilitate and monitor the processing of criminal history investigations
- Continually assess members for inclusion on terrorist watch lists
- Maintain members' surety certifications and credentials for real-time validation by regional security managers

RTV3 unites the efforts of participating public agencies, security personnel, labor groups, and contractors, facilitating the development and growth of this trusted contractor community. Established as part of the security procedures for the World Trade Center complex, NY/NJ airports and bus terminals, bridges, and other transportation facilities, the SWAC program meets the U.S. Department of Homeland Security's guidelines.

## For Certification and Training Record Management

#### Safety & Security Challenges:

*To manage member training records, assure personal identity verification, and optimally deploy skilled responders.*

#### RTV3 Solution:

The Emergency Personnel Information Center (EPIC) is a turnkey technology solution to help local police, fire, EMS, and other first responders manage training records, issue photo IDs, and field-authenticate responder credentials.

A secure web-based information center for department training and safety officers, EPIC enables participating organizations to securely collect and manage members' biographic, biometric, and technical training certifications. Automated notifications help assure compliance with training requirements and standard operating procedures for safe access to incident scenes.

EPIC delivers accurate, real-time, mission-critical information using any internet-enabled mobile device or PC. This helps reduce risk and enables more effective planning and response to natural disasters, terrorism, and critical incident scenes.

**Real-Time Technology Group (RTTG)** delivers secure technology solutions for managing mission-critical information challenges: personal identity verification, credential management, and business process control.

Since 1999, we have been helping public agencies and private enterprises improve their management of critical information with fully hosted and securely managed technical solutions.

Our technology is scalable, efficient, cost-effective, and easy-to-use. We invite you to learn more about our technologies and services by visiting our website at [www.realtimetg.com](http://www.realtimetg.com); or call: 908-782-6010.
